

# SPECIAL *Event* RENTALS

## ITEMS REQUIRED

ADJUSTABLE  
SLIDER →

FABRIC PANELS

WE RECOMMEND USING 3  
PANELS OF FABRIC FOR EVERY  
8 -10 FEET OF BACKDROP.

## HOW TO INSTALL PIPE & DRAPE

1. Set adjustable slider to the desired length and lock into place. Lay the adjustable slider on the ground. **NOTICE:** Sliders will adjust between 6' - 10', 4' - 7' and 8' - 14' based on the size booked.
2. Place baseplates down on each side of the adjustable sliders and insert the aluminum uprights.
3. Slide the fabric panels onto the adjustable slider working your way from largest to smallest end.
4. Click the adjustable slider into the aluminum upright. If the upright is too high to reach, take the aluminum upright off the baseplate, hold it at a 90° angle, click in the adjustable slider and replace back on the baseplate.
5. Adjust drape over all visible posts.
